

Q1.

Test Plan – Online Shopping Website

1. Objective:

The main objective is to verify that the online shopping website works correctly, securely, and reliably. The system should allow users to browse products, search products, add items to the cart, place orders, make payments, and track orders.

2. Testing Scope:

The following major features will be tested:

- User Registration and Login
- Product Search and Filtering
- Product Details
- Add to Cart and Remove from Cart
- Checkout and Address Management
- Payment
- Order Placement and Cancellation
- Order Tracking
- Logout

3. Testing Types:

According to the test planning approach, different testing types should be selected based on the application.

For the shopping website:

- Functional Testing
- Integration Testing
- Regression Testing
- API Testing
- Security Testing
- Performance Testing
- UI Testing
- Automation Testing

4. Test Approach:

QA will first analyze the requirements and identify **positive, negative, and boundary test scenarios**. For example, a valid login should be successful, while invalid credentials should show an appropriate error message. Test cases will then be executed and actual results will be

compared with expected results. The slides similarly emphasize checking positive, negative, and boundary conditions during requirement analysis.

5. Resources and Environment:

Required resources include:

- QA/Testers
- Developers
- Test Server
- Database
- Frontend
- Backend/API
- Test users
- Test data

Before execution, QA should verify that the application, database, APIs, users, test data, configurations, and required services are available.

6. Test Deliverables:

- Test Scenarios
- Test Cases
- Test Data
- Test Execution Report
- Defect Reports
- Test Summary/Closure Report

7. Automation Strategy:

Frequently repeated test cases such as login, product search, cart operations, and checkout can be automated to reduce manual effort and support regression testing.

8. Risks:

Possible risks include:

- Payment gateway failure
- Server downtime
- Incorrect test data
- Database/API unavailability
- Requirements changing during testing

9. Entry and Exit Criteria:

Entry criteria: Requirements are available, test environment is ready, and test data/users are

prepared.

Exit criteria: Planned test cases are executed, critical defects are resolved or accepted, and the testing results are documented.

Q2

1. Login Checklist

No.	Validation Point	Status
1	Verify login page opens successfully	☐
2	Verify username/email field is available	☐
3	Verify password field is available	☐
4	Verify login with valid username and password	☐
5	Verify login with invalid username	☐
6	Verify login with invalid password	☐
7	Verify login with both username and password empty	☐
8	Verify login with empty username	☐
9	Verify login with empty password	☐
10	Verify appropriate error message for invalid credentials	☐
11	Verify password is masked	☐
12	Verify login button works correctly	☐
13	Verify pressing Enter submits the login form	☐
14	Verify registered user can log in successfully	☐
15	Verify unregistered user cannot log in	☐
16	Verify account remains secure after multiple invalid attempts	☐
17	Verify Forgot Password option works	☐

18	Verify Remember Me option works, if available	☐
19	Verify logout prevents access to authenticated pages	☐
20	Verify login works correctly on supported browsers/devices	☐

2. Registration Checklist

No.	Validation Point	Status
1	Verify registration page opens successfully	☐
2	Verify all required fields are displayed	☐
3	Verify valid user information allows registration	☐
4	Verify registration with all fields empty	☐
5	Verify required-field validation messages	☐
6	Verify valid email format is accepted	☐
7	Verify invalid email format is rejected	☐
8	Verify already registered email cannot be used again	☐
9	Verify password field is available and masked	☐
10	Verify password meets required rules	☐
11	Verify incorrect Confirm Password is rejected	☐
12	Verify matching Password and Confirm Password are accepted	☐
13	Verify valid mobile number is accepted	☐
14	Verify invalid mobile number is rejected	☐
15	Verify minimum input length boundary	☐
16	Verify maximum input length boundary	☐

17	Verify special characters are handled correctly	☐
18	Verify duplicate account registration is prevented	☐
19	Verify successful registration shows confirmation message	☐
20	Verify newly registered user can log in	☐

3. Checkout Checklist

No.	Validation Point	Status
1	Verify checkout page opens from cart	☐
2	Verify selected products are displayed correctly	☐
3	Verify product quantity is correct	☐
4	Verify product price is correct	☐
5	Verify subtotal is calculated correctly	☐
6	Verify shipping charge is calculated correctly	☐
7	Verify discount/coupon is applied correctly	☐
8	Verify total amount is calculated correctly	☐
9	Verify customer name is required	☐
10	Verify valid shipping address is accepted	☐
11	Verify incomplete/invalid address is rejected	☐
12	Verify valid mobile number is accepted	☐
13	Verify invalid mobile number is rejected	☐
14	Verify different available payment methods work	☐
15	Verify invalid payment information is rejected	☐
16	Verify payment failure shows an appropriate message	☐
17	Verify successful payment creates an order	☐

18	Verify order ID/confirmation is displayed after successful order	☐
19	Verify cart is updated/cleared after successful order	☐
20	Verify user cannot place an order with an empty cart	☐
